Tar Spot has arrived! While it showed up late and levels were light, its presence in Northeast Kansas means monitoring will be needed during the 2023 growing season.

KSU Extension Row Crops Pathologist, Dr. Rodrigo Onofre, will share his observations on the disease plus management recommendations for the upcoming year. He will also share information on:

- Gray Leaf Spot Research in Kansas
- Soybean Disease Management, including fungicide resistance screening for Frogeye Leaf Spot
- Stalk Rots in Corn

Hope you can attend!
Meeting registration is requested (but not required!) by the end of business on Monday, February 13th to any Meadowlark Extension District Office:

- Seneca: (785) 336-2184
- Oskaloosa: (785) 863-2212
- Holton: (785) 364-4125

OR by e-mailing David Hallauer at dhallaue@ksu.edu

Thanks to our generous sponsors:

- Nortonville: Kansas Insurance, Inc
- Corning: Ag Partners Coop
